

Confused about what "Oregon Quadrant" means?

When OSCS requests your quadrant, we are looking for what general region of Oregon the field is in. We are not looking for the section quadrant per the Public Land Survey, nor do we need the section quarter. Here's a map to help you identify which "quadrant" of Oregon your field is in:

Another way to think of this situation: If the field's township is "north" and the field's range is "east," then the field would be in the NE quadrant of Oregon. The section may be SE, SW, etc., regardless of the Oregon quadrant, and we do not need to know the section letters (we DO need the section numbers though!).

And yet one more way to see things: If your field is located in township 5 S, range 3 W, section 32, the Oregon quadrant is **SW**.
